

Use of Multi-strain Probiotics as Adjunct in the Treatment of Dengue Haemorrhagic Fever

Lorraine Marie Item

Ospital ng Maynila Medical Center, Manila, Philippines

Methods:

Conclusion: This study has shown that dengue patients given Hexbio had:

- (i) Shorter length of hospital stay (discharged 1 day earlier)
- (ii) Earlier normalization of haematocrit levels (≈ 2 -fold faster)
- (iii) Less complications (2-fold reduction)
- (iv) Earlier resolution of abdominal pain (2-fold reduction)
