

The Potential Use of Probiotics in Preventing Respiratory Infection in Neonates born in A Tertiary Government Hospital: A Randomized, Double-Blind Controlled Clinical Study

Gretel G. Dema-ala, M.D.

Ospital ng Maynila Medical Center, Manila, Philippines

Methods:

Conclusion:

This study showed that there is no significant difference in the prevalence of respiratory infection between those neonates given milk with placebo and those given with Hexbio. It was shown that Hexbio was tolerable and has no side effects among neonates.
